

COMPREHENSIVE GEOMATICS MANAGEMENT

THE CGM SYSTEM

CUSTOMIZED

All CGM implementations are customized to meet client and project needs

DATA ACQUISITION

Data is collected through a combination of interviews and systems investigation

STANDARDIZED

Geospatial data can be standardized for cross functional use

AUDIT

Quality audit of geospatial data can be performed in addition to standardization

DATA MANAGEMENT

Secure, online management with web interface for upload and download by contractors and client (Webmap option)

SENSIBLE SOLUTIONS THAT OPTIMIZE YOUR BUSINESS

Comprehensive Geomatics Management (CGM) is a quality management system that can be deployed at any stage of your project. The program is designed to acquire, standardize and protect all the geospatial data collected by you and your contractors.

We believe geospatial data is a strategic corporate asset that can provide significant, long-term value to your organization. By implementing proven policies & procedures we can help protect the viability of your asset.

Our team of professionals can customize a CGM system that will create additional value for your company by significantly reducing project risk, increasing efficiency and reducing total costs.
